

Tata Technologies new world of connectivity and communication

Tata Technologies is a leader in engineering services outsourcing and product development IT services.

Tata Technologies has offices in Singapore, USA, India and the UK with a global work force of more than 8,500 employees.

New European HQ prompts technology investment to support growth

The impetus for Tata Technologies' audio visual review along with its investment in meeting room technology, digital signage and more cutting edge technology was its move from Coventry University's Technology Park to its own brand new building in Leamington Spa.

Tim Brown, Tata Technologies Technical Operations Manager, says: "Our new HQ was built from scratch. We wanted it to express our brand and serve the needs of up to 650 occupants. We took a holistic approach to IT, facilities access, and our audio visual requirements."

The new HQ AV fit out aimed to make users self-sufficient. Today, Tata Technologies benefits from collaborative technologies in 3 integrated multifunction room together with 3 BYOD (Bring Your Own Device) conference rooms, 11 huddle spaces, 11 standard meeting rooms, 2 large projection rooms, 16 digital signage screens, a reception video wall, a-room booking solution and 2 Surface Hubs.

The use of digital signage has helped TATA to communicate quickly, easily and dynamically with staff and customers throughout the building.

The flagship rooms within the installation are the 3 integrated rooms on the second floor. TATA required a flexible solution for these spaces so the rooms could be opened up or divided as required, using internal partition walls. The AV technology allows for the use of the room to change and users do not have to worry about the AV configuration as the system automatically reconfigures to the specific room set up.

PROJECT OVERVIEW

Project: Upgrade A/V equipment

Objective: A complete connectivity, collaboration and communication design and install at new HQ

Location: Leamington Spa

Tech spec:
3 multifunction rooms
3 conference rooms
11 huddle spaces
11 meeting rooms
2 projection rooms
16 digital signage screens
Reception video wall
2 Microsoft Surface Hubs

2 x MS Hubs

meeting 30 spaces

project services

A Carillion Case Study: Tata

Carillion Communications are leading UK AV integration experts and video conferencing specialists

- ✓ audio visual
- ✓ video conferencing boardroom design
- ✓ digital signage
- ✓ integrated systems
- ✓ technical consultancy system design
- ✓ MS Hub integration

.....
audio/web conferences
live events
conference streaming
meeting management

.....
maintenance/engineering
'advantage' support

- ✓ project management
- ✓ Included in the Tata project
